Finding Funding

for your projects

You have dreams for your community, but you also recognize the reality that taxes and user fees are being stretched to maintain existing facilities.

Help is available through grants and low-interest loans from state and federal sources. These funds can help clean up blighted areas and build a solid infrastructure that will attract industry. They are available to increase tourism and revitalize your downtown. They can fund stormwater management and up-to-code water and wastewater systems.

Ayres Associates' grant writers have secured millions of dollars in grants and loans for our clients – and then our scientists and engineers have completed the environmental and engineering work needed to realize their dreams. We can do the same for your hometown.
